# 75 Million Trees Were Planted...

...by BC's private managed forest owners since 2003.

Independent audits attest that environmental values including water quality and fish habitat are well protected.

Over 80% of BC's private managed forest lands are independently certified as sustainably managed.

75 million trees will absorb 700,000 tonnes of CO<sub>2</sub> each year — equivalent to 180,000 cars.

We're proud of what we do – ask if you want to know more – we look forward to hearing from you.

Working together to promote responsible stewardship of private forest land in British Columbia.
